For optimum results COPSTAR should be used in a programme and in combination with other balanced fertilisers and foliar feeds.

COPSTAR is compatible with most agricultural remedies. It is however advisable to do a miscibility test prior to mixing with other chemicals.

COPSTAR should preferably be applied in the early morning or late afternoon. Do not apply to plants that are undergoing a period of moisture or heat stress.

Consult with your chemical distributor should crop specific programmes or any other information be required about the use of COPSTAR.
