Toxic to fish and aquatic invertebrates and may contaminate water through runoff. This product has a potential for runoff for several months or more after application.

12.2 Persistence and degradability:

Copper is an inorganic compound that cannot be degraded in soils. Copper can be present under different forms, most of which are strongly bound to inorganic and organic ligands contained within soil and sediments. The fate and behaviour of copper, as its bio availability, strongly depend on the distribution of these different forms.

12.3 Bioaccumulative potential:

Copper is strongly bio-accumulated.

12.4 Mobility in soil:

Poorly draining soils and soils with shallow water tables are more prone to produce runoff that contains this product. Drift and runoff may be hazardous to aquatic organisms in water adjacent to treated areas.

12.5 Results of PBT and vPvB assessment:

This substance/mixture does not meet the PBT and vPvB criteria of REACH regulation, annex XIII

12.6 Other adverse effects:

High concentration in receiving water will injure aquatic life.
