

Bentazone 480 SL

Reg No. L7720 Act No. 36 of 1947

A water soluble concentrate, selective contact herbicide.

What is Bentazone 480 SL:

Bentazone 480 SL is a water soluble concentrate, selective contact action herbicide, containing Bendioxide (Bentazon), for post-emergence control of various annual broadleaf weeds and Yellow Nutsedge.

What are the advantages of Bentazone 480 SL:

- **Bentazone 480 SL** controls various important broadleaf weeds post emergence in the broadleaf crops listed below.
- **Bentazone 480 SL** controls Yellow nutsedge in crops listed.

Where to use Bentazone 480 SL used:

- **Bentazone 480 SL** can be used in broadleaf crops such as dry beans, green beans, soya beans, ground nuts, potatoes (cultivars Up-to- date, BP1 and Van der Plank) and peas.
- **Bentazone 480 SL** can be used in grain / cereal crops (maize, sorghum, wheat), either as a solo application or in tank mixture with atrazine.

How to use Bentazone 480 SL used:

- Apply **Bentazone 480 SL** early post-emergence to young and actively growing weeds.
- Apply a minimum of 3 t **Bentazone 480 SL** / ha in not less than 300 t water.
- Thorough wetting of the weeds is essential, because **Bentazone 480 SL** is a contact action herbicide.

*See label for further details and instructions.
