

RFC Range

ROLFES FULLY CHELATED

RFC is a range of soluble liquid, fully chelated micronutrient mixtures to be used as a foliar feed, fertigation, and in-furrow application.

What is RFC:

The **Rolfes Agri Fully Chelated** range — or in short **RFC** — is a unique innovative range of fertilizers containing full chelation **patented technology** by Rolfes Agri.

Why choose the RFC range:

1. Some products claim nutrients are chelated but do not provide the chelation percentage of the nutrients. When calculations are made, you might require 13 times the number of a chelation agent to chelate the number of nutrients within the product. The **RFC range** is fully (100%) chelated.
2. Traditionally a micronutrient is readily precipitated or oxidized in soil or cannot be absorbed through the leaves in the usual natural forms (or rather at a slow and low rate). Chelated micronutrients are protected from these factors.

3. Chelated nutrients are easier to use in combination with other products in a tank mix. If a product claims it is chelated but is not, it will easily settle out by forming complex bindings with other products with stronger binding in a tank mix.

Where to use the RFC products:

- Deficiencies of nutrients, and especially micronutrients, are a major problem in crop production. Deficiencies of these key elements can be the difference between a good yield and an outstanding yield.
- The **RFC range** now makes it easy to apply micro-nutrients, as well as secondary nutrients, in a fertilizer program throughout the season.
- All **RFC products** are registered on a wide variety of crops.
- Please refer to the labels for a detailed list of crops and application rates.

How to apply the RFC products:

- They contain **fully chelated** micronutrient mixtures which can be used as a foliar feed, fertigation (drip & pivot), in-furrow, and certain products can be used as a seed treatment application.
- It is recommended to always do a miscibility test before any **RFC product** is mixed with another product.

For optimum results, all **RFC products** should be used in a balanced fertilizer program in combination with other fertilizers and foliar feeds.

***See label for further details and instructions.**
