

# Pilula Range

Reg. No. B5920, B5921, B5960, B5961, B5962 Act No. 36 of 1947

The **Pilula** range consists of several eco-friendly, slow-release, pelletized micronutrient fertilizer products ranging between multi-element or single-element formulations.

## What is Pilula:

**Pilula** is a range pelletized micronutrient fertilizers designed to degrade and slowly release nutrients. Pellets are 2mm thick and made from pollard. When exposed to water, the pellets will expand and dissolve, releasing the nutrients contained within.

The pelletized form makes for micronutrients to easily be spread throughout a field, or even to be strategically placed. The **Pilula range** is specially designed to address micronutrient deficiencies through easy applicable slow-release pellets. Although micronutrients are needed in fewer amounts compared to the essential macronutrient, it does not make them any less important and is additional nutrients that a plant needs to achieve the highest possible yield and quality.

The **Pilula Range** composition:

- **Pilula Trace Mix**
- **Pilula Micro S**
- **Pilula Cu**
- **Pilula Fe**
- **Pilula Zn**

## How to use Pilula products:

**Pilula** products are conveniently made into bio-degradable pellets, which can easily be broadcasted on top of the soil surface or even strategically placed in a planting furrow or new tree hole.

## Where to use Pilula products:

The entire **Pilula range** of products is registered as pelletized micronutrient fertilizers to be used on a wide range of crops.

Contact your nearest Rolfes Agri representative for more information regarding the **Pilula range**.

## Benefits of Pilula range:

- All **Pilula** pellets are made 2mm thick, which makes it possible to be easily broadcasted throughout a field or even be strategically placed.
- **Pilula** pellets can also be mixed with granular fertilizers and broadcasted or strategically placed together.
- **Pilula** pellets provide a slow release of micronutrients.
- The **Pilula range** is perfect to address any micronutrient deficiencies in the root zone of several crops, either as single-element or as a variety of micronutrients at the same time as a shotgun approach.
- The **Pilula range** makes it possible to apply micronutrients where certain elements cannot be applied through irrigation.
- The **Pilula range** makes it possible to apply certain micronutrient elements where soil pH is sub-optimal towards the availability of these elements in the root zone.

# Pilula Reeks

Reg. No. B5920, B5921, B5960, B5961, B5962 Act No. 36 of 1947

**Die Pilula reeks bestaan uit verskeie ekovriendelike, stadig-vrystellende, verpilde mikro-nutriënt kunsmis produkte wat multi- sowel as enkel-element formulasies insluit.**

## Wat is Pilula reeks:

**Pilula** is 'n reeks verpilde mikro-nutriënt kunsmis wat ontwerp is om nutriënte vry te stel soos wat dit degradeer. Die pille is 2mm dik en gemaak van *pollard*. Wanneer die pille aan water blootgestel word begin hulle oplos, waarna die nutriënte vrygestel word.

Die verpilde vorm maak dit maklik om mikro-nutriënte breedwerpig te versprei, of om dit strategies in 'n land te plaas. Die **Pilula reeks** is spesiaal ontwerp om mikro-nutriënt tekorte aan te spreek deur gebruik te maak van oplosbare verpilde kunsmis. Alhoewel mikro-nutriënte in kleiner hoeveelhede benodig word teenoor makro-nutriënte, is hulle nie minder belangrik nie. Vir 'n plant om 'n hoë opbrengs van optimale kwaliteit te lewer is bykomende mikro-nutriënte dikwels nodig.

Die **Pilula reeks** bestaan uit:

- **Pilula Trace Mix**
- **Pilula Micro S**
- **Pilula Cu**
- **Pilula Fe**
- **Pilula Zn**

## Hoe om die Pilula reeks te gebruik:

Die **Pilula reeks** word gerieflik vervaardig as bio-afbreekbare pille wat maklik breedwerpig bo-op die grond toegedien kan word, of strategies in band of saam met 'n jong boom binne-in die plantgat.

## Waar om die Pilula produkte te gebruik:

Die volle reeks **Pilula** produkte is geregistreer as verpilde mikro-nutriënt kunsmis wat op 'n wye reeks gewasse benut kan word.

Kontak jou naaste Rolfes Agri verteenwoordiger vir meer inligting oor die **Pilula reeks**.

## Voordele van die Pilula reeks:

- Alle **Pilula** pille is 2mm dik, wat dit moontlik maak om die pille breedwerpig te versprei of strategies in 'n land te plaas.
- Die **Pilula** pille kan met korrel kunsmis gemeng word en saam breedwerpig gestrooi word, of strategies saam geplaas word.
- Die **Pilula** pille bied 'n bron van mikro-nutriënte wat stadig vrygestel word.
- Die **Pilula reeks** is perfek om mikro-nutriënt tekorte in die wortelsone van verskeie gewasse aan te spreek, in die vorm van enkel-element toedienings of as 'n verskeidenheid van mikro-elemente gelyk.
- Die **Pilula reeks** maak dit maklik om mikro-nutriënte toe te dien in gevalle waar sekere elemente nie deur die besproeiing toegedien kan word nie.
- Die **Pilula reeks** maak dit moontlik om mikro-nutriënte vir plante te gee waar die grond se pH die opneembaarheid van sekere elemente beperk.
