

FERTILISER

EasyGro™ Range

Reg No. K5241, K5240, K5242, K7304 Act No. 36 of 1947

The EasyGro™ range consists of four water-soluble suspension fertilizers with chelated micronutrients.

What is the EasyGro™ Range:

The EasyGro™ range consists of four water-soluble fertilizers with chelated micronutrients suitable for foliar feeding and fertigation.

When to use the EasyGro™ Range:

All the products in the range have a different but important role in achieving the maximum potential of a plant during certain key crop phenological stages. The different products are formulated with different auxin to cytokinin ratios.

Auxins are important for several processes in plants, including apical dominance, the formation of adventitious roots, and flower and fruit set.

Cytokinins are generally thought to stimulate cell division and slows the process of senescence (ageing). A high ratio of cytokinin to auxins is important for shoot growth, whereas a high auxin to cytokinin ratio stimulates root growth (See sketch).

The different products are:

- **EasyGro™ Starter** is a 2:1:2(43) water-soluble fertilizer ideal for early growth periods where there is a high demand for root development for seedlings, young transplants, and newly established plants.

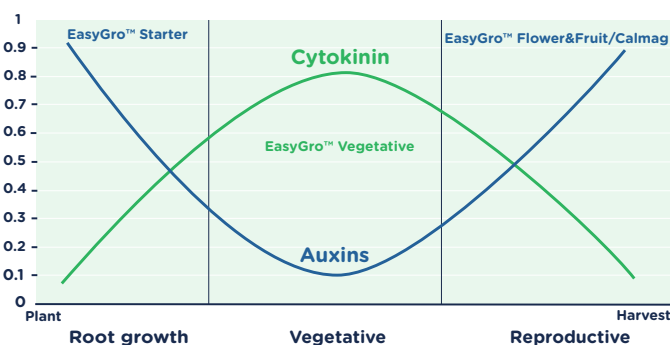

The **EasyGro Starter** contains: 175 g/kg N, 85 g/kg P, 174 g/kg K, 13 g/kg S, 3 g/kg Mg, 500 mg/kg Zn*, 500 mg/kg Fe*, 200 mg/kg Mn*, 200 mg/kg Cu*, 1000 mg/kg B, 50 mg/kg Mo as well as Cytokinins and Auxins.

- **EasyGro™ Vegetative** is a 6:1:3(44) water-soluble fertilizer ideal for periods where there is a high demand for vegetative growth. It can be applied pre- and post-harvest on crops. **EasyGro™ Vegetative** contains more cytokinins than auxins to promote shoot and leaf growth.

The **EasyGro Vegetative** contains: 265 g/kg N, 44 g/kg P, 135 g/kg K, 13 g/kg S, 2 g/kg Mg, 500 mg/kg Zn*, 500 mg/kg Fe*, 200 mg/kg Mn*, 200 mg/kg Cu*, 1000 mg/kg B, 50 mg/kg Mo.

- **EasyGro™ Flower and Fruit** is a 3:1:6(46) water-soluble fertilizer, high in concentrations of Potassium, ideally suitable for crops during the flowering and fruiting stages. **EasyGro™ Flower and Fruit** is higher in Auxins than Cytokinins.

Growth regulator levels

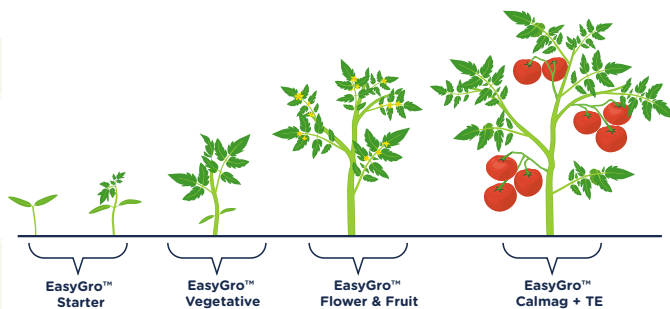

- **EasyGro™ Calmag + TE** is a 14:0:1(15) water-soluble fertilizer that contains high concentrations of Calcium and Magnesium with no Phosphate. The product is ideal for the fruit development stage of crops to ensure a high quality of fruit.

The **EasyGro™ Calmag** contains 129 g/kg Ca, 26 g/kg Mg, 14 g/kg K, 140 g/kg N, 2000 mg/kg B and 50 mg/kg Mo.

Where to use the EasyGro™ Range:

The EasyGro™ range was specially developed to be easily used at different physiological stages of the plant.

How to use the EasyGro™ Range:

- The EasyGro™ range can be applied as a foliar feed or used in fertigation.
- Available in **25 kg** and **1 kg** packaging.

GARDEN AND HOME USE:

- Available in 1 kg packaging for easy use.
- Easy to use/mix - 200 g/10 l water as a drench or foliar feed.

*EDTA Chelated

*See label for further details and instructions.

FERTILISER

EasyGro™ Reeks

Reg Nr. K5241, K5240, K5242, K7304 Wet Nr. 36 van 1947

Die Easygro™ reeks bestaan uit vier verskillende wateroplosbare korrel bemestingstowwe met mikro-elemente.

Wat is die EasyGro™ reeks:

Die **Easygro™ reeks** bestaan uit vier wateroplosbare kunsmis mengsels met gecheleerde mikro-elemente — wat gebruik kan word as blaarbespuitings of om kunsmis deur die besproeiingstelsel te gee.

Waaruit bestaan die EasyGro™ reeks:

Al die produkte in die reeks is geformuleer om tydens verskillende fisiologiese stadiums in 'n plant se lewensiklus 'n belangrike rol te speel. Die verskillende produkte is met verskillende oksiene tot sitokiniene verhoudings geformuleer.

Ouksiene speel 'n belangrike rol in verskeie prosesse in 'n plant, dit sluit in prosesse soos: apikale dominansie, die vorming van adventiewe wortels, sowel as blom en vrugset.

Sitokiniene, aan die ander kant, word belangrik geag in die stimulasie van seldeling en in die vertraging van die verouderingsproses in 'n plant. 'n Hoë verhouding van sitokiniene teenoor oksiene is belangrik vir lootgroei, terwyl 'n hoë verhouding van oksiene teenoor sitokiniene belangrik is vir die stimulasie van wortels (sien skets).

Die verskillende produkte in die reeks is:

• **EasyGro™ Starter** is 'n 2:1:2(43) wateroplosbare kunsmis wat ideaal is vir die vroeë groeistadiums van 'n plant waar goeie wortelontwikkeling nodig is, veral op nuut oorgeplante saailinge en nuut gevestigde bome.

EasyGro™ Starter bevat: 175 g/kg N, 85 g/kg P, 174 g/kg K, 13 g/kg S, 3 g/kg Mg, 500 mg/kg Zn*, 500 mg/kg Fe*, 200 mg/kg Mn*, 200 mg/kg Cu*, 1000 mg/kg B, 50 mg/kg Mo sowel as sitokiniene en oksiene.

• **EasyGro™ Vegetative** is 'n 6:1:3(44) wateroplosbare kunsmis wat ideaal is om te gebruik vir periodes waar vegetatiewe groei vinnig geskied. Dit kan tydens die seisoen of as 'n na-oes bemesting aangewend word.

EasyGro™ Vegetative bevat: 265 g/kg N, 44 g/kg P, 135 g/kg K, 13 g/kg S, 2 g/kg Mg, 500 mg/kg Zn*, 500 mg/kg Fe*, 200 mg/kg Mn*, 200 mg/kg Cu*, 1000 mg/kg B, 50 mg/kg Mo.

• **EasyGro™ Flower and Fruit** is 'n 3:1:6(46) wateroplosbare kunsmis, wat ideaal is vir gewasse wat in die blom- en vrugvulstadium is aangesien dit hoog in Kalium is. **EasyGro™ Flower and Fruit** is hoër in oksiene as sitokiniene.

EasyGro™ Flower and Fruit bevat: 141 g/kg N, 46 g/kg P, 275 g/kg K, 13 g/kg S, 2 g/kg Mg, 500 mg/kg Zn*, 500 mg/kg Fe*, 200 mg/kg Mn*, 200 mg/kg Cu* en 1000 mg/kg B, 50 mg/kg Mo.

Groeireguleerdersvlakke

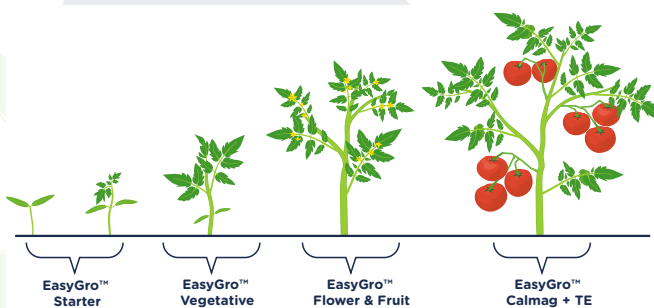

• **EasyGro™ Calmag + TE** is 'n 14:0:1(15) wateroplosbare Kunsmis wat hoë konsentrasies van Kalsium en Magnesium bevat met geen Fosfate nie. Die produk is ideaal vir vrugontwikkeling om te help om hoë kwaliteit vrugte te verseker.

EasyGro™ Calmag bevat 129 g/kg Ca, 26 g/kg Mg, 14 g/kg K, 140 g/kg N, 2000 mg/kg B en 50 mg/kg of Mo.

Waar om die EasyGro™ produk reeks te gebruik:

Die **EasyGro™ reeks** is spesiaal ontwerp om tydens verskillende fisiologiese stadiums benut te word.

Hoe om die EasyGro™ reeks te gebruik:

- Die **EasyGro™ reeks** kan toegedien word as 'n blaarbespuiting of deur die besproeiingstelsel.
- Beskikbaar in **25 kg** en **1 kg** verpakking.

Vir huis en tuin gebruik:

- Beskikbaar in 1 kg verpakking vir maklike gebruik.
- Maklik om te gebruik — 200 g/10 l water om te deurdrenk of as 'n blaarbespuiting.

*EDTA gecheleer

*Sien etiket vir verdere inligting en instruksies.
