

ADJUVANT

No More Foam

Reg. No. L10253 Act No. 36 of 1947

An emulsion, for use as an anti-foaming or defoaming agent for the suppression of foam in the spray tank.

What is No More Foam:

Active ingredients

Polydimethyl siloxane,
Dimethyl siloxane
100 g/l

No More Foam is an emulsion anti-foaming or defoaming agent for the suppression of foam in agrochemical spray tank mixtures.

Benefits of No More Foam:

- No delays due to foam formation during the spray tank filling process.
- **No More Foam** is ideal to use with high foaming formulations e.g. high surfactant to glyphosate formulations.
- **No More Foam** is an easy flowing liquid, no granules that clog openings of containers.
- **No More Foam** is easy to dose with just a few squirts from the container into the spray tank mixture.
- **No More Foam** is cost-effective due to small quantities required.
- **No More Foam** does not alter the volume of water in the tank due to small quantities required.

How to apply No More Foam:

- Always refer to labels of all agrochemical products that will be used in a tank mixture with **No More Foam**.
- Shake well before use.
- Apply 1 to 2 squirts of **No More Foam** prior to, or after, the formation of problematic foam.
- An additional squirt of **No More Foam** can be added if foam formation persists.

Where to use No More Foam:

- **No More Foam** performs best with formulations that tend to cause excessive foam in the spray tank when surfactants and emulsified agrochemicals are used in the spray mixture.
- The formation of foam or a foam layer can be suppressed and reduced by using a small amount of **No More Foam**.
- **No More Foam** can be added preventively to mixtures that are known for foaming.
- **No More Foam** can alternatively, be added to the spray mixture after the formation of problematic foam.
- Apply 20 ml **No More Foam** per 100 l water (or spray mixture) prior to, or after, the formation of problematic foam in the spray tank.

*See label for further details and instructions.
